- Don’t miss the last pickup. Refer to your program details for pickup times.
- Make sure you wash your hands before and after collection.

Rhinostics Nasal Swab Collection Kit
for Nexus High Throughput SARS-CoV-2 Assay

On-site Instructions

Far In Vivo Diagnostic Use, For Prescription Use Only, For Use Under Emergency Use Authorization Only
For use by individuals 18 years and older.

Version 1.0
1. Don’t forget: Activate your kit online at color.com/covid/activate. You need your unique barcode, which you’ll find on your collection tube.

2. Before collecting your sample, wash your hands thoroughly for 20 seconds and dry them well.

3. Unpack the biohazard bag and collection device from the box and remove the collection tube from the inner sleeve. Use care when removing tube; it is sharp.

4. Unscrew the cap from the collection tube. You can discard the cap.

5. Rotate swab tip in first nostril, 3 times. Insert the swab into one nostril, until you feel resistance. Using medium pressure against the inside of your nostril the whole time, roll the swab in a large circular motion at least 3 times.
   Note: Swab should not go further than 1 inch.

6. Gently slide the swab up and down against the inside of your nostril 3 times. Keep medium pressure on the swab against the inside of your nostril.

7. Hold the swab against the inside of your nostril. Keep there for about 10 seconds.

8. Repeat steps 5 to 7 in the other nostril. Keep at least 3 times, slide the swab up and down, then hold the swab against your nostril for 10 seconds.
   Note: You will use the same end of the swab for both nostrils.

9. Put swab into the tube portion of the collection device. The tip of the swabs that went into your nose should go into the tube first.

10. Screw the cap closed tightly. Make sure the top is carefully screwed closed.
   Note: After screwing the collection device closed, wash your hands thoroughly for 20 seconds and dry them well.

11. Put collection device into the biohazard bag. Seal the bag closed.

12. Bring the biohazard bag to your designated test collection point on the day you collected your sample. Refer to your program details if you’re not sure where to return your sample.

Note: Don’t miss the last pickup time.
